		<p>This course focuses on the accounting strategies of global business and how the accounting principle applies to these strategies. The global challenges of doing business requires accountants and managers who are more aware of the international financial complexities involved. Upon completion of this course, students will have knowledge and understanding relevant to solving problems arising from the increasing pace of international business, finance and investment. This course is an advanced course to study the accounting theories and principles of financial accounting and understand financial reporting practices, both internal and external, in a global setting. It presents international accounting within the context of managing global enterprises. As the organization of monetary information, accounting supplies all relevant financial information that a company requires for its managing and reporting purposes. We discuss the key factors that influence accounting standards and practices in different countries, and how those factors impact the harmonization of standards worldwide. The topics will cover various international accounting theories &amp; practices and case studies which illustrate the specific accounting issues that are encountered in international business operations.</p>
